***Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 15-31 drawn to a DLL circuit, classified in class 327, subclass 158.
- II. Claims 1-14, drawn to a delay circuit, classified in Class 327, subclass 270.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of Group I does not require the subcombination of Group II. For example, the invention I has separate utility such as an DLL circuit comprising a delay tuner having a structure different from the structure of the delay tuner claimed in the invention II. Thus, the invention I does not require the particulars of the invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
